4. INSTALLATION AND SETUP

4.1 Wiring Instructions

The thermostat features 6 different color-coded wires for easy identification and connection. When disassembling your old thermostat, note the color of the wires to ensure correct connection to the new unit. If this is a new installation, refer to the wiring diagrams and tables below.

Figure 4.1: Wiring diagram and color codes for the thermostat. This image illustrates the back of the thermostat with its attached wires and provides a table mapping RVP wire designations to common manufacturer terminal designators.

Ensure the power to the RV's air conditioning system is turned off before beginning any wiring work. Connect the wires according to the corresponding colors and functions as detailed in the table below:

RVP Wire Designation and Color	Function
B (12 Volt -) Blue	12 Volt Negative
R (12 Volt +) Red	12 Volt Positive
Y (Cooling) Yellow	Cooling Mode Activation
W (Heat) White	Heating Mode Activation
GH (High Fan) Green	High Fan Speed Activation
GL (Low Fan) Gray	Low Fan Speed Activation

1. Single Stage Heat/Cool: This thermostat is designed to handle both heating and cooling functions with ease, ensuring you stay comfortable in all weather conditions.

2. Convenient Control: Take charge of your RV's environment effortlessly. Use this thermostat to control your air conditioner, gas or electric heat strips, and fans for a hassle-free experience.

3. Easy Installation: Designed for user-friendly installation, it allows you to start enjoying your perfectly controlled RV climate quickly.

Figure 4.2: Thermostat operations and corresponding 12VDC(+) connections. This diagram shows how different thermostat modes (Cool, Heat, Fan) are achieved by connecting the Red (12V+) wire to specific function wires.

4.2 Mounting

Once wired, secure the thermostat to the wall using appropriate mounting hardware. Ensure it is level and firmly attached. The design allows for easy replacement as the holes often align with existing thermostat mounts.

5. OPERATING INSTRUCTIONS

The FARAMZ 7330F3852 thermostat provides intuitive control over your RV's climate system. Familiarize yourself with the controls:

Figure 5.1: Front view of the FARAMZ 7330F3852 RV Thermostat, illustrating the temperature slider, system mode switch, and fan speed switch.

- **Temperature Slider:** Located at the top, this slider allows you to set your desired temperature. Move the slider to align with the desired temperature marking (e.g., 60, 70, 80, 90 degrees Fahrenheit).
- **System Switch:** This switch controls the operating mode of your RV's climate system.
 - **COOL:** Activates the air conditioning system to cool the RV interior.
 - **OFF:** Turns off both heating and cooling systems.
 - **HEAT:** Activates the heating system (gas or electric heat strips) to warm the RV interior.
- **Fan Switch:** This switch controls the operation of the fan.
 - **AUTO:** The fan operates automatically with the cooling or heating system, turning on and off as needed to maintain the set temperature.
 - **ON:** The fan runs continuously, regardless of whether the cooling or heating system is active.
 - **LOW/HIGH:** These settings control the fan speed when the fan is set to "ON" or when operating in "AUTO" mode (if supported by your RV's system).

To operate, select your desired system mode (COOL, OFF, or HEAT) and then adjust the temperature slider to your preferred setting. For fan operation, choose between AUTO or ON, and select the desired fan speed (LOW or HIGH) if applicable.

6. MAINTENANCE

The FARAMZ 7330F3852 thermostat is designed for durability and requires minimal maintenance. Follow

these guidelines to ensure optimal performance:

- **Cleaning:** Periodically wipe the thermostat's surface with a soft, dry cloth to remove dust and dirt. Avoid using abrasive cleaners or solvents, as these can damage the finish or internal components.
- **Inspection:** Occasionally inspect the wiring connections behind the thermostat to ensure they remain secure. If any wires appear loose or damaged, consult a qualified technician for repair.
- **Environmental Conditions:** Ensure the thermostat is not exposed to extreme temperatures, direct sunlight, or excessive moisture, which can affect its accuracy and lifespan.

7. TROUBLESHOOTING

If you encounter issues with your FARAMZ 7330F3852 thermostat, refer to the following common troubleshooting steps:

Problem	Possible Cause	Solution
Thermostat not powering on / No display	No power supply; Loose wiring; Blown fuse in RV system.	Check RV's main power supply. Verify all wiring connections are secure. Inspect and replace any blown fuses in your RV's electrical panel or the AC unit itself.
System (AC/Heat) not turning on	Incorrect mode selected; Temperature setting not met; Loose wiring; RV AC/Furnace issue.	Ensure the system switch is set to COOL or HEAT. Adjust the temperature slider to a setting that calls for cooling (lower than ambient) or heating (higher than ambient). Check wiring connections. Consult your RV's AC/Furnace manual for system-specific troubleshooting.
Fan not operating	Fan switch set to AUTO when system is off; Loose fan wiring.	Set the fan switch to ON to test continuous operation. Verify fan wiring connections (Green for High, Gray for Low).
Inaccurate temperature readings	Thermostat exposed to direct sunlight or drafts; Sensor obstruction.	Relocate the thermostat if it's in an area with extreme temperature fluctuations. Ensure no objects are blocking the thermostat's sensor.

If the problem persists after attempting these solutions, it is recommended to contact a qualified RV technician or the manufacturer for further assistance.
