Finding Your Model Number

One common question that we get from customers is “I have a Coleman thermostat that I need to replace. Which one would work for my application?” The easiest and most accurate way to determine which thermostat would work for your application would be to remove the entire thermostat from the wall so that you can see the back plastic plate and the wires coming out from the back of the thermostat. There should be a white sticker on the back plastic plate of the thermostat as shown in the image to the right. The number that we need off of this sticker would be the RVP number. As you can see in this picture, the RVP number is 7330G335. Once you find the RVP number from your Coleman thermostat, use the chart below to find the current replacement. Not seeing your thermostat model on the chart? Feel free to call us at 765-575-8496 or [send us an email!](#)

Old Model	Current Replacement

*Installation instructions for the stat 6535-3442: (when replacing 6535-335 and 6535B335)

1. Please cut the three pin from the old (original) thermostat as close the back of the stat as possible. Leaving plenty of wires hanging from the three pin plug
 2. When the new stat arrives, cut the four pin plug as close to the plug as possible leaving plenty of wires hanging from the back of the stat.
 3. The orange/white wire on the new stat is not utilized (simply cap off).
 4. Match the other three wires (color to color) from the three pin plug removed from the original stat (heat shrink wrap, wire tie or butt connect.
 5. Plug the new stat (6535-3442) into the three pin and nine pin plugs hanging from the wall. This should be a complete replacement.
 6. ***Note*** the nine pin will be short one wire on the new stat as this wire is no longer needed. All is well – these installation instructions are from Coleman directly and will result with a successful replacement!
-

**Requires you to cut off the three pin plug and cap off the orange wire.

For Further Assistance
